

TEAM2100 Canvey Island southern shoreline revetment project

This factsheet provides information about the planned highways surveys taking place at Canvey Island.

What are we telling you about?

We are telling you about the upcoming highways surveys taking place on Canvey Island.

The surveys will be conducted by Ridge, and they will record the conditions of the highway network leading to the construction areas for our works. These works will renew and improve the erosion protection on the seaward face of the tidal defences, known as revetment. During the surveys, the team will take photographs to assess the current highway conditions.

They will cover the following areas:

- The Thorney Bay Road south of and including from the vehicular maintenance access to The Wooden Park only
- Western Esplanade; Furtherwick Road between Eastern Esplanade and Western Esplanade only
- Eastern Esplanade and Marine Parade
- The main compound location, eastern end of Eastern Esplanade, south of Athol Close
- Satellite compound 1, south of Western Esplanade
- Materials storage area, north-eastern corner of Wooden Park, Thorney Bay

The surveys will be carried out on foot from the existing pavement and will not impact traffic flow. They will also be non-intrusive and will not create any additional noise and do not require any digging.

Why are we doing this work?

The Canvey Island southern shoreline revetment project will maintain the existing high level of tidal flood risk protection to thousands of homes, businesses, and infrastructure on Canvey Island into the future. Further details can be found at this website:

<https://consult.environment-agency.gov.uk/east-anglia-c-e/canvey-southern-shoreline-project/>

When will the work take place?

The surveys will start on 28th November and the work will be completed by 1st December.

The team will be working from 8am to 4pm.

How can I find out more?

All our proposed future activity on-site is taking place within our Thames Estuary Asset Management (TEAM) 2100 programme. TEAM2100 is a 10-year programme of works to refurbish and replace existing tidal flood defences, one of the key first steps in delivering our Thames Estuary 2100 plan.

Our vision of how tidal flood risk management will be delivered across the Thames Estuary and is available to view via the website below:
