

TEAM2100 Canvey Island southern shoreline revetment project

This factsheet provides information about the planned surveys taking place at Canvey Island. The TEAM2100 Programme is investing in the tidal flood defences in the Thames Estuary as part of the Thames Estuary 2100 Plan.

What are we telling you about?

We are telling you about the upcoming archaeological surveys taking place along the southern shoreline of Canvey Island.

These surveys will start on 1st August 2022. They will involve several archaeologists walking along the shore from Thorney Bay to the Island Yacht club, taking notes of anything of interest and using geophysical surveying equipment to scan the foreshore at various locations for any buried archaeological remains. The surveys are non-intrusive and don't require any digging.

Why are we doing this work?

The Canvey Island shoreline revetment project will maintain the existing high level of tidal flood risk protection to thousands of homes, businesses, and infrastructure on Canvey Island into the future.

These surveys are part of the preparation for the main works to the revetment. They will identify any areas of the foreshore with archaeological interest and any need for further investigations before the main revetment works begin. They will also help to determine what we need to do to mitigate impacts on archaeology during construction.

Further details on the project can be found at this website:

<https://consult.environment-agency.gov.uk/east-anglia-c-e/canvey-southern-shoreline-project/>

What is the impact of the work?

The surveys are expected to take place for approximately two weeks with minimal disruption to the public.

The proposed working hours and days are as follows:

Monday – Friday: 08.00 – 18.30

How can I find out more?

If you would like to know more about the project, please contact the project stakeholder lead using the details below:

Claire Bishop, Stakeholder Engagement Lead

All our proposed future activity on-site is taking place within our Thames Estuary Asset Management (TEAM) 2100 programme. TEAM2100 is a 10-year programme of works to refurbish and replace existing tidal flood defences, one of the key first steps in delivering our Thames Estuary 2100 plan.

Our vision of how tidal flood risk management will be delivered across the Thames Estuary and is available to view via the website below:
